

New Business Applications through Pale-colored Hydrocarbon Resins and SIS for Labels

March 11, 2003

Our Chemicals Division has been developing products, including Quintone C5 hydrocarbon resin and Quintac thermoplastic elastomer SIS, in response to customer demand.

Recent products developed to meet customer needs include unconventional pale-colored hydrocarbon resin and SIS suitable for use in labels. Both of these products have been well received.

Offering excellent cost performance, pale-colored hydrocarbon resin is used in such products as pale-colored adhesives and

has already earned a solid reputation among customers.

We believe the outstanding characteristics of our SIS for labels will benefit both domestic and overseas customers in the pursuit of new applications.

Try the sample and see for yourself the possibilities these products hold for you.
