

Growing Expectation for Polymerized Toner

March 9, 2006

Demand for polymerized toner is rapidly increasing, reflecting recent trends in printer requirements toward higher-quality images, faster printing speeds and full-color output. A number of printer makers have already launched new models utilizing polymerized toner. These trends are expected to continue. Following years of development efforts, ZEON Corporation became the first company in the world to successfully launch the commercial production of polymerized toner in 1992 and has since been a leading maker of the product. ZEON Corporation will continue to develop higher-grade polymerized toner, such as small-particle diameter toner, low-energy fixing toner and full-color toner.
