

## ZEON officially launched ZEONEX.COM in March

April 14, 2008

ZEONEX.COM is a portal site for ZEON's ZEONEX and ZEONOR brand Cyclo Olefin Polymers (COP). This site brings to you basic information including application ideas, technical data and even molding guides. Now you can find more about ZEONEX and ZEONOR in this brand new website.

ZEONEX is the well known, popular plastic material for Optical application with tight controlled refractive index, excellent light transmittance, and low moisture absorption. ZEONEX can also benefit medical packaging applications including bottles, vials, syringes or even blister packages.

ZEONOR COP is recommended for general applications where low moisture absorption, an inert surface, and clarity are required. ZEONOR provides excellent molding performance compared to other engineering plastics. Applications include bio-diagnostic, display, automotive, media storage, and non-medical packaging applications.

Click here for more information <http://www.zeonex.com/>.

We ZEON look forward to meeting you at ZEONEX.COM.
